EDUCATION

JERUSALEM COLLEGE OF TECHNOLOGY 2020 - 2026

- Computer Science studies

80 credits completed

TOR ACADEMY 2018 - 2020

Liberal Arts studies

90 credits completed

CORE SKILLS

- React & TypeScript
- JavaScript, HTML & CSS
- Node.js & Express
- REST APIs & SQL
- Cypress test automation
- Git & GitHub

PROFILE

Junior developer with professional experience in web development, software quality assurance and Cypress test automation. Built full-stack applications with React, TypeScript, Node.js and databases, including a payment platform and a food inventory app. Brings hands-on development, testing and prototyping experience to junior software and web development roles.

WORK EXPERIENCE

- **Initso GmbH** 01/2025 - 06/2026

  QA Engineer

  - Developed and maintained automated end-to-end tests for web applications using Cypress.
  - Performed functional and regression testing and worked with developers to validate releases.
  - Identified, documented and reproduced software defects.
  - Prototyped and integrated AI support workflows and agents for customer-support use cases.
  - Built prototypes to evaluate technical concepts and automation opportunities.

- **Freelance**

  Frontend Developer & Designer 03/2022 - 08/2022

  - Designed, developed and maintained a student-focused website.
  - Built responsive interfaces with HTML, CSS and JavaScript.
  - Maintained website content and improved the user interface.

TECHNICAL SKILLS

LANGUAGES

TypeScript, JavaScript, Python, Java, C#, C, C++, SQL

FRONTEND

React, HTML5, CSS3

BACKEND

Node.js, Express, REST APIs

DATABASES

PostgreSQL, Firebase / Firestore, SQL

TESTING

Cypress, Functional Testing, Regression Testing

TOOLS

Git, GitHub, VS Code, Postman, pgAdmin

OTHER

Arduino, ESP32, Linux, Networking, Wireshark

LANGUAGES

- German - Native
- English - Professional
- Russian - Advanced
- Hebrew - Conversational

SELECTED PROJECTS

FridgeTracker

2025 - 2026

Built a cross-platform app to track food inventory and expiration dates. Implemented authentication, shared household inventories, shopping lists, barcode scanning, offline functionality and notifications.

- React, TypeScript, Firebase, Capacitor; AI-assisted development

Full-Stack Payment Platform

2025 - 2026

Built a full-stack payment platform with user accounts, transactions, payment methods, claims and admin workflows. Implemented REST APIs, relational database integration and responsive interfaces.

- React, TypeScript, Node.js, Express, SQL, REST APIs

C# / .NET Desktop Application

2024

Developed a C#/.NET WPF desktop application with multi-tier architecture, user management, and database integration.

- C#, .NET, WPF, multi-tier architecture

Library Management Database

2024

Designed and implemented a PostgreSQL database for a library management system, including UML modeling and Python-based data handling.

- PostgreSQL, Python, pgAdmin, UML

Solar Tracking System | Hackathon

2024 - 2025

Built and tested a solar-powered battery system with automatic sun tracking using Arduino and C. Worked on circuit design, power management and hardware prototyping.

- Arduino, C, circuit design, hardware prototyping
